Abstracts

Through Hole Technology (THT) refers to the method of mounting electronic components onto printed circuit boards (PCBs) by inserting component leads through drilled holes and soldering them to pads on the opposite side, creating strong mechanical bonds and reliable electrical connections; this contrasts with surface mount technology (SMT), where components are placed directly onto the PCB surface. THT is characterized by its robustness, ease of manual assembly and repair, and suitability for high-power, high-voltage, or large components such as connectors, transformers, and electrolytic capacitors, though it generally requires more board space, involves slower automated assembly processes, and incurs higher drilling costs compared to SMT.

The global Through Hole Technology market size was estimated at USD 3250.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Through Hole Technology market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
