Report Overview:

Silicon through-hole Technology (TSV) is a kind of circuit interconnection technology. It realizes interconnection between chips by making vertical conduction between chips and between wafers and between wafers. Different from the previous IC packaging bonding and dot coating stacking technology, TSV can maximize the chip stacking density in three-dimensional direction, reduce the chip size, increase the transistor density of the chip, improve the electrical interconnection performance between layers, improve the chip operation speed, and reduce the power consumption, design difficulty and cost of the chip.

The Global Through-Silicon Vias (TSVs) Market Size was estimated at USD 2245.12 million in 2023 and is projected to reach USD 7698.93 million by 2029, exhibiting a CAGR of 22.80% during the forecast period.
