Abstracts

Thruster Repair and Maintenance Service refers to the specialized support and technical procedures aimed at ensuring the optimal performance, reliability, and longevity of marine thruster systems. Thrusters ? which include bow thrusters, stern thrusters, and azimuth thrusters ? are critical components used for precise vessel maneuvering, especially during docking, undocking, and low-speed operations. These services involve routine inspections, diagnostic evaluations, overhauls, part replacements, alignment, and emergency repairs to prevent failures and reduce vessel downtime. The repair and maintenance process typically includes removal and disassembly of the thruster unit, cleaning and inspection of internal components (such as propellers, gearboxes, seals, and bearings), replacement of worn or damaged parts, and reassembly with realignment and functional testing. Depending on vessel type and operational frequency, maintenance schedules may vary from periodic servicing during dry-docking to in-situ repairs and condition-based maintenance using sensor data.

The global Thruster Repair and Maintenance Service market size was estimated at USD 725.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
