Abstracts

Thyristor power controllers are solid-state electronic devices used to regulate the amount of power delivered to electrical loads, primarily resistive heating elements, by controlling the phase angle or burst firing of alternating current (AC) using thyristors (such as SCRs or triacs). They offer precise and efficient power management by adjusting the output voltage or current through time-proportional control methods, enabling smooth and accurate temperature regulation, reduced inrush currents, and enhanced energy savings in industrial heating applications. These devices are critical in processes requiring consistent thermal conditions, such as in plastic molding, semiconductor manufacturing, and industrial furnaces, where reliability, responsiveness, and minimal harmonic distortion are essential.

The global Thyristor Power Controller market size was estimated at USD 725.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
