Report Overview

Thyristor Surge Protectors are devices used to protect equipment from severe overvoltage transients that are located in high exposure environments. The surge protector limits the voltage that is being supplied to an electric device by either shorting current or blocking to reduce the voltage under a safe threshold. These thyristor surge protector devices prevents overvoltage damage to sensitive circuits by induction, lightning, and power line crossings. These devices acts as the break over?triggered crowbar protectors. The turn-off of these surge protectors occurs when the surge current decreases below the holding current value. Thyristor surge protector devices ensures the proper functioning of electrical equipment at the time of lightning strikes. These devices are of prime importance for any business or residential and commercial buildings. There are many different types of surge protection devices, few of them includes power surge protection device, surge line protection device and a thyristor surge protectors. Thyristor surge protectors are used in various applications for the safety of electrical and electronic devices.
