## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ti-6Al-4V ELI competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Ti-6Al-4V ELI is an improved high-performance alloy developed on the basis of the classic Ti-6Al-4V titanium alloy. During the smelting process, the content of interstitial elements such as iron, oxygen, and carbon is strictly controlled to ensure that these elements are at an extremely low level. Thanks to the extremely low content of interstitial elements, compared with ordinary Ti-6Al-4V titanium alloy, this alloy has better toughness, ductility, and fatigue resistance, and can maintain good mechanical properties especially in low-temperature environments. With its excellent biocompatibility and outstanding comprehensive performance, Ti-6Al-4V ELI is widely used in the manufacturing of medical implants and special aerospace components with strict material performance requirements.

The global Ti-6Al-4V ELI market size was estimated at USD 198.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
