Abstracts

Tialn-coated drill bits are cutting tools engineered for high-performance drilling applications, featuring a titanium aluminum nitride (Tialn) coating applied to the drill bit substrate?typically high-speed steel or carbide?through physical vapor deposition (PVD). This advanced coating significantly enhances the tool?s surface properties, delivering exceptional hardness, high temperature resistance, and reduced friction, which collectively improve wear resistance, extend tool life, and enable higher cutting speeds. The coating?s distinct gold-colored appearance also aids in visual identification. Tialn-coated drill bits are primarily utilized in demanding industries such as aerospace, automotive manufacturing, mold and die production, and general metalworking, where they excel in machining hard and abrasive materials including alloy steels, stainless steels, cast iron, and non-ferrous metals.

The global Tialn Coated Drill Bits market size was estimated at USD 850.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.15% during the forecast period.
