Abstracts

Ticket grabbing software is a specialized tool system designed to automate ticket purchasing, helping users quickly secure tickets during peak periods or for popular events. By simulating manual operations or invoking platform interfaces, it automatically refreshes the page, identifies ticket sources, fills in purchase information, and submits orders, thereby increasing ticket grabbing success rates. This type of software typically features high concurrency and low-latency response mechanisms, and integrates multi-threaded scheduling, verification code recognition, and IP proxy switching to mitigate ticketing platform anti-crawl mechanisms. Ticket grabbing software is widely used for concerts, sporting events, festivals, and scenic spot tickets, becoming a crucial tool for users to secure tickets for popular events when demand outstrips supply. Some software also supports features like ticket reservations, automated queuing, and automatic payment, evolving towards intelligent and platform-based capabilities.

The global Ticket Grabbing Software market size was estimated at USD 1677.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.80% during the forecast period.
