Abstracts

A Tidal Stream Generator is a renewable energy device that harnesses the kinetic energy of tidal currents to produce electricity. Similar in concept to underwater wind turbines, these generators are placed on the seabed in areas with strong tidal flows, where the movement of water turns the blades or rotors, which then drive a generator. Tidal stream generators are highly predictable, with energy outputs linked to tidal cycles, offering a consistent and clean power source. Their advantages include minimal visual impact and high energy density, though they require robust engineering to withstand harsh underwater conditions.

The global Tidal Stream Generator market size was estimated at USD 515.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 18.20% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Tidal Stream Generator market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
