Report Overview:

Tidal turbines are similar to wind turbines in that they have blades that turn a rotor to power a generator. They can be placed on the sea floor where there is strong tidal flow. Because water is about 800 times denser than air, tidal turbines have to be much sturdier and heavier than wind turbines. Tidal turbines are more expensive to build than wind turbines but can capture more energy with the same size blades.

The Global Tidal Stream Turbines Market Size was estimated at USD 234.52 million in 2023 and is projected to reach USD 348.03 million by 2029, exhibiting a CAGR of 6.80% during the forecast period.
