Abstracts

Tile Waterproof Adhesive is a material specially used for pasting tiles and ensuring that they have good waterproof performance. It is usually mixed with cement, quartz sand, high molecular polymer and other additives in a certain proportion. These ingredients together give the tile adhesive strong bonding, flexibility and waterproof performance. The main feature of Tile Waterproof Adhesive is its excellent waterproof performance, which can effectively prevent moisture from penetrating into the gap between the tile and the wall or the ground, thereby avoiding problems such as dampness, mold, and falling off of the wall caused by moisture penetration. At the same time, it also has good bonding and flexibility, and can adapt to the slight deformation of the tile caused by temperature changes, ensuring that the tile is firmly adhered to the substrate and is not prone to hollowing, falling off, etc.

The global Tile Waterproof Adhesive market size was estimated at USD 5130.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
