## Abstracts

Time-Lapse incubators are high-end experimental equipment that integrates temperature control, gas control and high-resolution real-time imaging systems, and are widely used in the fields of cell biology, embryonic development, stem cell research and drug screening. The equipment can not only provide a stable culture environment (such as constant temperature, constant humidity, constant CO<sub>2</sub> concentration), but more importantly, it can continuously capture dynamic images of cells or embryos during the culture process without interfering with the growth conditions of the sample, thereby achieving full recording and analysis of their dynamic behaviors such as growth, division and migration.

The global Time-Lapse Incubators market size was estimated at USD 292.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.30% during the forecast period.
