Report Overview

A set of IEEE 802 Ethernet sub-standards is called time-sensitive networking (TSN), which is defined by the IEEE TSN task group. Such standards allow deterministic real-time communication over the ethernet. Determinism over ethernet is achieved by TSN, by using time synchronization and a schedule that is shared between network components. By defining queues based on time, TSN ensures a bounded maximum latency for scheduled traffic through switched networks. This states that in a TSN network, latency of critical scheduled communication is guaranteed.

The global Time-Sensitive Networking (TSN) market size was estimated at USD 166.40 million in 2023 and is projected to reach USD 6133.26 million by 2032, exhibiting a CAGR of 49.30% during the forecast period.

North America Time-Sensitive Networking (TSN) market size was estimated at USD 87.75 million in 2023, at a CAGR of 42.26% during the forecast period of 2024 through 2032.
