## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tin-Bismuth Solder competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Tin-Bismuth Solder is a lead-free alloy of tin and bismuth (typically Sn42?Bi58), valued for its low melting point (~138 ?C), good wetting, and reliability in temperature-sensitive electronics. The supply chain starts with tin mining (China, Indonesia, Peru) and bismuth recovery (China, Mexico, Bolivia), followed by smelting into ingots and alloying into bars, wires, pastes, or powders. Midstream, products are flux-coated, extruded, or atomized; downstream, they serve PCB assemblers, electronics, automotive, and industrial sectors for low-temperature, lead-free soldering. In 2024, global output reached 39,000 tons with 50,000 tons capacity, unit prices ranged USD 28,000?51,000 per ton depending on Bi content and form, and the average gross margin was 27%.

The global Tin-Bismuth Solder market size was estimated at USD 1124.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
