Abstracts

Tin cured silicone rubber, also known as peroxide-cured silicone rubber, is a high-performance elastomer formed through a vulcanization process using organic peroxides as cross-linking agents, which initiates the formation of a robust three-dimensional network structure that imparts superior thermal stability, chemical resistance, and mechanical durability, making it particularly suitable for applications requiring prolonged exposure to extreme temperatures, harsh chemicals, or demanding mechanical stresses, such as in automotive gaskets, industrial seals, medical devices, and electrical insulation components, where its ability to maintain elasticity and performance integrity under severe conditions distinguishes it from other elastomers.

The global Tin Cured Silicone Rubber market size was estimated at USD 1250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
