Abstracts

Tin Free Steel (TFS)-based laminated steel is a type of laminated material that uses Tin Free Steel, namely chromium-plated iron, as its substrate. It is a composite material formed by firmly bonding one or more layers of plastic film to the surface of chromium-plated iron through processes like thermal lamination or adhesive bonding. This material retains the characteristics of TFS, such as high strength, good formability, and certain corrosion resistance. Meanwhile, it also possesses the advantages of plastic films, including excellent barrier properties, water resistance, printability, and decorativeness. It can effectively enhance the performance of metal packaging and is widely used in the can-making fields of the food, beverage, and chemical industries, prolonging the product's shelf life and improving the packaging's aesthetic appeal and market competitiveness.

The global Tin Free Steel Tfs Based Laminated Steel market size was estimated at USD 1162.44 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
