Abstracts

Tin plated steel sheet is a composite material consisting of a steel substrate coated with a thin layer of tin, primarily through an electrolytic process, combining the strength and formability of steel with the corrosion resistance, solderability, and aesthetic appeal of tin. It is widely utilized in the packaging industry for manufacturing food and beverage cans, aerosol containers, and crown caps due to its ability to protect contents from oxidation and contamination, while its non-toxic properties make it suitable for direct food contact applications. Beyond packaging, tin plated steel finds use in electrical components, such as shielding and connectors, where its conductivity and resistance to environmental factors are advantageous, as well as in automotive parts, construction materials, and general fabrication where a balance of durability, workability, and corrosion protection is required.

The global Tin Plated Steel Sheet market size was estimated at USD 24000.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
