## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Tinplate Boxes competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of tinplate boxes reached 18.2 billion units, with an average selling price of \$0.42 each. Tinplate boxes are metal packaging containers made primarily of electroplated tinplate steel sheets (tinplate). They offer excellent corrosion resistance, moisture resistance, pressure resistance, and printing properties, making them widely used in food, tea, candy, tobacco, cosmetics, stationery, and electronic accessories. The main upstream raw materials are electroplated tinplate, tinplate ink, glue, and mold steel. Core suppliers include Baosteel, Nippon Steel, POSCO, Toyo Can, and PPG. Downstream customers primarily include food and beverage brands, daily chemical companies, and electronic consumer product packaging manufacturers. Global production capacity is approximately 220 billion units per year, with an average industry gross profit margin of approximately 17%. In downstream consumption, food packaging accounts for 55%, daily chemical products for 25%, and gift and other packaging for 20%. Among upstream raw materials, tinplate accounts for 62% of costs, while inks and printing coatings contribute 18%. The future development direction will focus on the promotion of lightweight tinplate, recyclable environmentally friendly coatings and intelligent packaging and printing technologies to meet the dual needs of sustainability and high-end branding.

The global Tinplate Boxes market size was estimated at USD 7645.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
