Abstracts

Tiny implantable heart pumps are miniature medical devices designed to provide mechanical circulatory support for patients with severe heart failure. These pumps, often categorized as ventricular assist devices (VADs) or percutaneous heart pumps, help maintain blood flow when the heart's natural pumping function is insufficient. Unlike traditional heart pumps, these devices are small, minimally invasive, and can be implanted via catheter-based procedures, reducing surgical risks. They are primarily used as a bridge-to-transplant solution or for short-term cardiac support in critically ill patients.

The global Tiny Implantable Heart Pumps market size was estimated at USD 1546.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.10% during the forecast period.
