Abstracts

Tire bladder molds are essential tools used in the manufacturing process of tires, primarily helping to form the tire inner bladder. The bladder mold is a crucial component in tire production, serving the primary function of providing the necessary internal pressure during the tire curing process, thus ensuring the accuracy and quality of the tire inner bladder's shape. These molds are typically made of high-strength alloy steel or special steel materials, which possess high temperature resistance, corrosion resistance, and wear resistance. Depending on the size and type of tire, the design and dimensions of the bladder molds vary to meet different production needs. Modern tire bladder molds not only enhance production efficiency but also ensure the consistency and quality of the finished tires.

The global Tire Bladder Molds market size was estimated at USD 286.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.90% during the forecast period.
