Report Overview

Tire curing bladders are specialized inflatable rubber components used in the tire manufacturing process, specifically during the curing stage of tire production. They play a crucial role in shaping and curing the tire while it is being subjected to heat and pressure in a tire curing press. The bladder is inserted into the uncured tire, and as it inflates, it presses against the interior surface of the tire mold, transferring heat and pressure to the tire to create the desired shape, tread pattern, and sidewall details.
