Report Overview:

Hemostasis is a process which causes bleeding to stop, meaning to keep blood within a damaged blood vessel (the opposite of hemostasis is hemorrhage). It is the first stage of wound healing.

Tissue sealing agents are used during medical procedures to achieve hemostasis. They vary based on their mechanism of action, composition, ease of application, adherence to tissue, immunogenicity and cost. These agents permit rapid hemostasis, better Visualization of the surgical area, shorter operative times, decreased requirement for transfusions, decreased wound healing time and overall improvement in patient recovery time.

The Global Tissue Sealing Agents and Hemostasis Market Size was estimated at USD 3694.18 million in 2023 and is projected to reach USD 4436.80 million by 2029, exhibiting a CAGR of 3.10% during the forecast period.
