Report Overview

Tissue testing involves the analysis of biological tissue samples to detect diseases, genetic mutations, or other health-related abnormalities, playing a critical role in diagnostics, research, and personalized medicine. The market is driven by increasing prevalence of chronic diseases such as cancer, advancements in molecular diagnostics, and a growing emphasis on precision medicine. Key segments include immunohistochemistry (IHC), in situ hybridization (ISH), and next-generation sequencing (NGS), with demand rising due to their accuracy in disease detection and treatment planning. The adoption of digital pathology and AI-powered analytics is further accelerating growth by improving efficiency and diagnostic precision. North America dominates due to advanced healthcare infrastructure and high R&D investment, while Asia-Pacific is emerging as a high-growth region fueled by improving healthcare access and increasing cancer incidence. However, challenges such as high costs, regulatory complexities, and a shortage of skilled professionals may hinder expansion.
