## Abstracts

Titanium alloy orthodontic archwire is an archwire made of metal material used for orthodontic treatment. Its elasticity and stiffness are between stainless steel archwires and nickel-titanium archwires. It has good wear resistance and low friction coefficient, which helps reduce the resistance of tooth movement speed during the correction process. It can provide moderate force and is suitable for fine adjustment of teeth in the middle and late stages of orthodontic treatment. Compared with stainless steel archwires, titanium alloy archwires are lighter and more formable, making them suitable for patients who are sensitive to pain.

The global Titanium Alloy Orthodontic Archwire market size was estimated at USD 59.87 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.00% during the forecast period.
