Report Overview:

A Zirconia Abutment offers an esthetic alternative to metal implant abutments. Due to the white color of zirconia, abutments made of this material are often not as noticeable. The biocompatibility and microstructural properties of zirconia are well known. Zirconia is very durable and inflexible in pressure. Zirconia abutments have excellent mechanical strength and reliability. In addition to its favourable mechanical properties, the material is thought to accumulate less dental plaque compared to titanium. It is possible that the peri-implant soft tissues around zirconia may heal more quickly compared to peri-implant tissues in contact with titanium. That's why it's a great material for dental implants. Zirconia abutments can be custom milled or ordered as stock abutments from a specific manufacturer.

The Global Titanium-based Zirconia Abutment Market Size was estimated at USD 1068.27 million in 2023 and is projected to reach USD 1576.40 million by 2029, exhibiting a CAGR of 6.70% during the forecast period.
