The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Titanium Dioxide (TiO₂) Powder for Coating competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Coating titanium dioxide (TiO₂) powder is a high-performance inorganic white pigment specifically designed for the coatings industry, with its main component being titanium dioxide. It plays a crucial role in the coating system, not only providing exceptional hiding power and high whiteness to the coating but also significantly enhancing its physical and chemical properties. With advantages such as a high refractive index, strong tinting strength, good dispersibility, non-toxicity, and excellent stability, coating titanium dioxide powder is widely used in various solvent-based and water-based coatings. The inclusion of titanium dioxide in coatings effectively improves hiding power, tinting strength, corrosion resistance, lightfastness, and weather resistance, strengthens the film's mechanical strength and adhesion, prevents cracks, and blocks the penetration of ultraviolet light and moisture, thereby delaying the aging of the film and extending its service life. Additionally, it aids in reducing material usage and expanding the variety of coatings, making it an indispensable key raw material for enhancing the quality and performance of coatings.

The global Titanium Dioxide (TiO₂) Powder for Coating market size was estimated at USD 8419.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
