Report Overview

Titanium hydride powder is a fine, grayish-black powder composed of titanium and hydrogen, typically produced through hydrogenation of titanium metal at elevated temperatures, resulting in a brittle compound that decomposes upon heating to release hydrogen. It serves as a crucial precursor in powder metallurgy, particularly for manufacturing titanium alloys, ceramics, and porous materials, as well as functioning as a hydrogen storage medium and a foaming agent in metal foam production. The material's key properties—high hydrogen content, thermal stability, and reactivity—make it valuable in aerospace, automotive, and energy sectors, where lightweight, high-strength materials and efficient hydrogen storage solutions are in demand. Recent advancements in additive manufacturing and sustainable energy technologies have further expanded its applications, driving interest in optimized production methods and purity levels to meet industry requirements.
