Abstracts

Titanium tungsten etchant is a specialized chemical formulation designed for the selective removal of titanium-tungsten (TiW) alloy layers, primarily used in semiconductor manufacturing and microelectronics fabrication processes. This etchant functions through controlled chemical reactions that target the TiW metallization while preserving adjacent materials such as silicon, silicon dioxide, or other metal layers, ensuring precise patterning during the production of integrated circuits, MEMS devices, and advanced packaging technologies. Its composition typically involves a balanced mixture of oxidizing agents, complexing agents, and stabilizers to achieve high etch rates, excellent selectivity, and minimal undercut, meeting the stringent requirements of modern nanoscale fabrication.

The global Titanium Tungsten Etchant market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
