Report Overview

The TMR current sensor is a new type of current sensor, which can measure the current intensity in the wire and convert it into a signal output proportional to the current. TMR sensors use the magnetoresistance effect to measure current, and have the advantages of high precision, strong robustness, and low cost, so they are more and more widely used in new energy vehicles. In new energy vehicles, TMR current sensors can be used in battery management systems, motor drive systems, and charging control systems. It can accurately measure current parameters such as charging and discharging current in the battery pack, driving motor control current and charging current, so it is very suitable for high-precision control, safety protection and management of new energy vehicles. At the same time, the TMR current sensor also has comprehensive advantages such as improving system efficiency, reducing the number of models and saving energy, which also makes it more and more widely used in new energy vehicle systems. Therefore, it will be very important for automobile manufacturers and electronic component suppliers to develop and produce high-quality TMR current sensors and related detection equipment that meet the needs of new energy vehicles. Only in this way can the efficient, reliable and safe operation of new energy vehicle batteries and electric power systems be realized, and the healthy development of the new energy vehicle industry be promoted.
