Abstracts

The market for toe blood oxygen sensors encompasses medical devices designed to measure oxygen saturation levels (SpO₂) and pulse rate specifically at the toe, often used in clinical settings for patients with compromised peripheral circulation, such as those with diabetes, peripheral vascular disease, or during surgeries involving the lower extremities. These sensors operate using photoplethysmography (PPG) technology, emitting light through the toe tissue and detecting changes in light absorption to calculate oxygen saturation, and are particularly valued in situations where finger-based sensors may be unreliable due to cold extremities, low perfusion, or the need for continuous monitoring without interfering with hand mobility. Key applications include hospital ICUs, operating rooms, podiatry clinics, and home healthcare for chronic condition management, with demand driven by the rising prevalence of diabetes, aging populations, and increasing surgical volumes, alongside technological advancements improving accuracy, comfort, and integration with telehealth platforms.

The global Toe Blood Oxygen Sensor market size was estimated at USD 180.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
