Abstracts

Tolvaptan is a medication that belongs to a class of drugs known as vasopressin receptor antagonists. It is primarily used to treat hyponatremia, a condition characterized by low levels of sodium in the blood. Tolvaptan works by blocking the action of vasopressin, a hormone that regulates water balance in the body. By inhibiting vasopressin, tolvaptan helps to increase urine output and restore sodium levels in the blood. It is commonly prescribed for conditions such as heart failure, liver cirrhosis, and syndrome of inappropriate antidiuretic hormone secretion (SIADH).
