Abstracts

A tone generator and probe kit, sometimes referred to as a toner and probe kit or cable tracker, is an electronic troubleshooting toolset used to identify, trace, and verify electrical and communication cables within complex wiring systems such as Ethernet networks, telephone lines, coaxial cables, or other low-voltage wiring installations. The tone generator component applies a distinctive audible or digital signal onto a target wire or conductor, while the inductive probe, when moved along cables or near termination points, detects and amplifies this signal, allowing technicians to isolate specific cables among many, locate breaks or faults, and verify correct connections without the need for physical disconnection or visual tracing.

The global Tone Generator And Probe Kit market size was estimated at USD 45.25 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
