Abstracts

A tongue retaining device (TRD) is a type of oral appliance used primarily in the treatment of sleep-disordered breathing, particularly obstructive sleep apnea (OSA), by holding the tongue in a forward position during sleep to prevent it from collapsing and obstructing the airway; these devices are typically made of soft, medical-grade silicone or similar materials and function by creating a gentle suction that secures the tongue tip in a bulb or compartment, thereby maintaining an open posterior air passage without the need for more invasive interventions like continuous positive airway pressure (CPAP) machines or surgical options.

The global Tongue Retaining Device market size was estimated at USD 32.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
