Report Overview

Tool holders refer to adapters used to mount tools such as drills, cutting tools, and turning tools in machine tool equipment. In a machining operation, selecting an efficient tool holder is as crucial as selecting an appropriate cutting tool. For smooth machining operations, it is very important that the tool is properly inserted in the collet and rotates through its cutting path with minimal run-out. To ensure minimal loss of tool efficiency and to avoid any deflection from the clamping source, it is important that the collet clamps the tools effectively. Therefore, ball bearing collet nuts are used to ensure the same. Ball bearing in the collet enables an operator to run both clockwise and counter clockwise tools in the same tool holder. This type of bearing also eliminates the possibility of tool slippage during the routing process. While changing the tool: it is important to setup the tool in the correct tool changing fixture to ensure the proper securing of the tool holder. The tool holder has equal importance as the cutting tool in the overall machine tools industry ecosystem. Innovation in tool holding systems has been slower than the innovation in machines.

There are many advantages of tool holders in the global market such as low capital costs – surge in throughput without investment in new capacity, rework and concessions and less scrap – less disparity, higher process capability at first time, reduced human error - repeatable measurement and automated feedback and augmented automation – low direct labor costs and unproductive machine downtime. Additionally, new approaches and technologies towards the manufacturing of upright and reliable tool holders, which can be mounted with perfection on any machine and inserted with several tools are expected to be prominent drivers for the global tool holders market growth. Contemporary manufacturing technologies, such as additive manufacturing and CNC heavy duty machining center ease the process as well as enhance the quality of products. This, together with the manufacturing of intelligent tool holders in various

designs and complex shapes, and different sizes are noteworthy achievements that are expected bolster market growth over the forecast period. Also, the market for tool holders has witnessed rapid growth due to development in the manufacturing sector in all end use industries globally.
