Report Overview:

A tool monitoring system is a device or solution designed to track usage patterns of specific tools within workshops or factories. It typically monitors factors such as how often certain tools are being utilized, what tasks they're being employed towards, any calibration issues identified, and whether repairs or servicing should occur based on accumulated wear. There are standalone systems that could communicate wirelessly or via cables directly into larger database systems that would compile data across numerous machines at different locations to provide further insights for fleet management purposes.
