Report Overview

Tool retractors return tools to a preset position after use, usually out of way of the work area. The tool is often affixed to a cable, which is wound onto a spring-loaded reel to perform the retraction. There are several different types of tool retractors. Reel type retractors/balancers store unused support line on a reel, paying out and retracting line as needed. This is the most common type of tool retractor and balancer. Arm support tool retractors employ pivoting sections of rigid members. These allow the tool more flexibility to move both horizontally and vertically. Helical extension coil tool retractors are simple devices that extend and retract on the axis of the coiled spring / support.
