Abstracts

Tooth Desensitizer refers to products designed to reduce or eliminate tooth sensitivity, typically caused by exposed dentin or enamel erosion. These products work by blocking the nerve signals in the teeth, providing relief from discomfort during activities like eating hot, cold, or sweet foods. Tooth desensitizers are commonly available in gels, sprays, or creams and may be used by both dental professionals and consumers at home. The tooth desensitizer market has been witnessing a steady growth trend in recent years, and this trend is expected to continue in the coming years. There are several factors contributing to this growth: 1. Increasing oral health awareness: People are becoming more conscious about their oral health and are seeking solutions for common problems like tooth sensitivity. This increased awareness has led to a growing demand for tooth desensitizers. 2. Rising prevalence of tooth sensitivity: Tooth sensitivity is a common dental issue that affects a significant portion of the population. Factors such as tooth erosion, gum recession, and teeth grinding contribute to tooth sensitivity. As these issues become more prevalent, the demand for tooth desensitizers increases.

The global Tooth Desensitizer market size was estimated at USD 505.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
