Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Toothed Electromagnetic Clutch competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Toothed Electromagnetic Clutch is a mechanical coupling device that engages and disengages torque transmission through electromagnetically actuated interlocking teeth (jaws/dogs). When energized, the electromagnetic coil generates magnetic force to pull the armature, causing the jaw teeth to mesh and transmit torque; when de-energized, springs return the jaws to the disengaged position. Combining the high torque capacity of jaw-type mechanisms with the rapid response of electromagnetic control (typical engagement time
