## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Toothpaste Grade Abrasive Silica competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Toothpaste Grade Abrasive Silica is a high-purity amorphous powder produced through a controlled wet-precipitation process, featuring tunable abrasive strength and rheology-modifying capability to enhance stain removal efficiency and maintain paste stability while protecting enamel. In 2024, the production was 142,143 tons and the average price was \$1,400 per ton. A typical single-line annual capacity was about 2,000 tons and the average gross margin was about 63%. Its upstream raw materials are water glass and sulfuric acid, with representative suppliers including Solvay, PQ Corporation and BASF. The midstream involves controlled precipitation and drying, particle-size classification, surface modification and quality testing to ensure stable abrasive performance and impurity safety. Downstream applications cover low-end and high-end toothpaste formulations, with representative customers such as Colgate, P&G and Unilever. The market outlook for Toothpaste Grade Silica remains robust as global consumers place greater emphasis on oral hygiene, premium toothpaste formulations, and sensitivity-care products. Demand is supported by its role as a mild abrasive and rheology modifier that enhances cleaning efficiency while maintaining enamel safety. Growth will also be driven by the expansion of whitening, natural-origin, and low-abrasivity product lines, which increasingly rely on engineered silica grades with controlled particle morphology and optimized performance. As emerging markets continue to upgrade daily-care consumption, manufacturers of oral-care brands will accelerate adoption of high-purity silica to differentiate product function and texture, ensuring steady long-term demand.

The global Toothpaste Grade Abrasive Silica market size was estimated at USD 199.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.10% during the forecast period.
