Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Toothpaste Grade Precipitated Silica competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Toothpaste Grade Precipitated Silica is an amorphous, high-dispersion powder produced through controlled wet-chemical precipitation, offering tailored particle morphology and pore structure that provide gentle abrasivity, stable thickening behavior, and improved paste uniformity. In 2024, its production was 327,731 tons and the average price was USD 1,190 per ton. A typical single production line provided about 2,000 tons of annual capacity, and the average gross margin was about 45%. Its two key upstream raw materials are water glass and sulfuric acid, and representative suppliers include Solvay, PQ Corporation, and BASF. The midstream focuses on controlled precipitation and drying, particle-size classification, surface modification, and quality inspection to ensure consistent polishing performance and impurity safety. Downstream applications include both low-end and high-end toothpaste formulations, with representative customers such as Colgate, P&G, and Unilever. The market outlook for Toothpaste Grade Silica remains robust as global consumers place greater emphasis on oral hygiene, premium toothpaste formulations, and sensitivity-care products. Demand is supported by its role as a mild abrasive and rheology modifier that enhances cleaning efficiency while maintaining enamel safety. Growth will also be driven by the expansion of whitening, natural-origin, and low-abrasivity product lines, which increasingly rely on engineered silica grades with controlled particle morphology and optimized performance. As emerging markets continue to upgrade daily-care consumption, manufacturers of oral-care brands will accelerate adoption of high-purity silica to differentiate product function and texture, ensuring steady long-term demand.

The global Toothpaste Grade Precipitated Silica market size was estimated at USD 390.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.00% during the forecast period.
