Abstracts

A top running overhead crane is a heavy-duty material handling system consisting of a bridge beam supported by end trucks that travel along elevated runways, typically mounted on building columns or support structures, with a hoist mechanism that moves laterally across the bridge to lift, lower, and transport loads across a defined rectangular work area. These cranes are characterized by their ability to utilize the full headroom of a facility, operating above floor-level obstacles and providing maximum hook height for efficient vertical lifting capacity, making them ideal for applications requiring high load capacities?often ranging from 5 to over 500 tons?and precise load positioning in industrial settings such as manufacturing plants, warehouses, steel mills, and shipyards.
