The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Topical Antibiotics for Acne competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Topical antibiotics for acne are medications applied directly to the skin to treat mild to moderate inflammatory acne. They work by reducing the population of *Cutibacterium acnes* and controlling inflammation, thereby improving papules and pustules. Common topical antibiotics include clindamycin, erythromycin, and fusidic acid, typically formulated as gels, solutions, or creams.
