## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Topological Insulator Materials competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global topological insulator materials production reached approximately 12,922 Kg, with an average global market price of around USD 5,000 per Kg. A factory gross profit of USD 1,000 per Kg with 20% gross margin. A single line full machine capacity production is around 200 Kg per line per year. downstream demand is concentrated in quantum computing followed by spintronics, energy harvesting and photonics. Bi<sub>2</sub>Te<sub>3</sub> powder is used to fabricate thermoelectric legs for small cooling modules. Topological insulators are materials that are insulating in their bulk but conducting on their surfaces or edges. This unique property comes from their topological order and is protected by certain symmetries, such as time-reversal symmetry, meaning the surface conduction is robust against defects. Key characteristics include the flow of electrons on the surface with spin-momentum locking and the presence of conducting states within the insulating gap.

The global Topological Insulator Materials market size was estimated at USD 64.61 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.90% during the forecast period.
