Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Toroidal Powder Core competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Toroidal Powder Core production reached approximately 90,000 tons with an average global market price of around US\$ 4,720 per tons, a single-line production capacity of approximately 2,000 ton/year, and a gross profit margin of approximately 30%-40%. Toroidal Powder Core is a type of magnetic core made from compressed and heat-treated magnetic metal powders such as iron, iron-silicon-aluminum (sendust), molypermalloy (MPP), high-flux alloy, or nanocrystalline materials, formed into a toroidal (ring-shaped) structure. The magnetic powder particles are insulated from each other by a binder, creating a distributed air-gap structure that minimizes eddy current losses and enhances high-frequency performance. This configuration provides low core loss, stable permeability, excellent temperature characteristics, and strong resistance to magnetic saturation, making toroidal powder cores ideal for switch-mode power supplies, inductors, transformers, power factor correction (PFC) circuits, and electromagnetic interference (EMI) filters. Upstream includes the production of magnetic alloy powders, such as iron, sendust, molypermalloy (MPP), high-flux, and nanocrystalline materials, as well as binders and insulating coatings used in powder compaction. The midstream segment focuses on core manufacturing processes, including powder mixing, molding, heat treatment, insulation coating, and precision machining to produce toroidal cores with stable magnetic properties. Downstream involves the assembly of inductors, transformers, EMI filters, and power electronic modules, where toroidal powder cores are widely used in switch-mode power supplies, renewable energy converters, automotive electronics, and telecommunications equipment.

The global Toroidal Powder Core market size was estimated at USD 423.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
