Report Overview:

Total containment vessels (TCVs) are fully enclosed containers designed to safely secure, transport, and test explosive devices in order to protect critical assets. TCVs are used as mitigation solutions to help protect people, property, and the environment from primary and secondary fragmentation and gas that generally result from the detonation of an explosive device. Once the suspect object is contained in the chamber, the surrounding area is protected from blast effects from the explosive device. TCVs may also provide protection against chemical or radiological devices.
