### Report Overview

Total Nutrition Admixture (TNA), also known as the 'All-in-One' system (AIO), is a commonly used parenteral nutrition preparation in clinical practice. It refers to the nutrient solution that is placed in a bag and infused after the nutrients needed by the body every day, including seven major nutrients such as carbohydrates, fat emulsion, amino acids, water, electrolytes, trace elements and vitamins, are mixed in proportion under a strictly sterile environment. This mixing method makes the combination of various nutrient substrates more reasonable, and can evenly input various nutrients into the body at the same time, thereby meeting the nutritional needs of patients. The preparation and use of complete nutrient mixtures require guidance and supervision by professional medical personnel to ensure their safety and effectiveness. In clinical practice, it is mainly used for patients who cannot or should not eat orally, such as critically ill patients, postoperative patients, and patients with intestinal dysfunction, etc., to provide them with comprehensive nutritional support and promote the recovery and prognosis of patients.
