Abstracts

The total phosphorus analyzer is suitable for the detection of surface water, groundwater, industrial wastewater, domestic wastewater and other water quality. Digest the sample with potassium persulfate (or potassium nitrate-perchloric acid) under neutral conditions. All the phosphorus contained is oxidized to orthophosphate. In an acidic medium, orthophosphate reacts with ammonium molybdate to generate phosphomolybdate heteropolyacid in the presence of antimony salt, which is immediately reduced by ascorbic acid to form a blue complex. The domestic market for testing and measuring equipment will be approximately RMB 20 billion in 2022, and the global testing and measuring equipment market will maintain rapid growth.

The global Total Phosphorus Analyzer market size was estimated at USD 107.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
