Abstracts

The total suspended particulate (TSP) monitor is a professional device used to measure the total amount of suspended particulate matter in the air. Its core function is to accurately capture and quantify particles in the air with a dynamic diameter less than or equal to 100 microns (μm). These particles include dust, smoke, pollen, spores, etc., which can be suspended in the atmosphere for a long time and have an important impact on air quality, human health and the ecological environment. The TSP monitor converts abstract particle concentrations into quantifiable data through sampling and analysis technology, providing a scientific basis for environmental assessment, pollution tracing and governance decisions.

The global Total Suspended Particles Tsp Monitor market size was estimated at USD 152.66 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.70% during the forecast period.
