Abstracts

Totally Enclosed Ground Flares (TEGF) are systems for safely handling combustible gases in industrial settings. They mainly include a flare stack, burner, ignition system and more. The principle is to let combustible gases react with air or other oxidants to burn. When industrial gases arrive, they first go through a liquid separation tank. Then the gas enters the flare stack, mixes with air or oxidants at the burner and is ignited. It burns stably in a closed space, turning into harmless substances like carbon dioxide and water. TEGFs are known for high safety, good environmental protection and strong adaptability, playing a crucial role in petrochemical, coal chemical and other industries to dispose of waste gases.

The global Totally Enclosed Ground Flares Tegn market size was estimated at USD 123.73 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
