## Abstracts

Touch detection chips are the core components for implementing touch functions in smart devices. When a user touches the screen, the sensor detects the touch action (such as pressure changes, charge changes, etc.) and converts these changes into electrical signals. After being processed by the touch detection chip, these signals are converted into instructions that can control the device, thereby realizing the operation of the device.

The global Touch Detection Chips market size was estimated at USD 599.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
